* Intermittent operation: the permissible values may occur for max. 10% of every minute.

** Peak load: the permissible values may occur for max. 1% of every minute.

*** For speeds lower than given, consult factory or your regional manager.

- Intermittent speed and intermittent pressure must not occur simultaneously.
- Recommended filtration is per ISO cleanliness code 20/16. A nominal filtration of 25 micron or better.
- Recommend using a premium quality, anti-wear type mineral based hydraulic oil HLP(DIN51524) or HM (ISO 6743/4).
If using synthetic fluids consult the factory for alternative seal materials.
- Recommended minimum oil viscosity 13 mm²/s [70 SUS] at 50°C [122°F].
- Recommended maximum system operating temperature is 82°C [180°F].
- To assure optimum motor life fill with fluid prior to loading and run at moderate load and speed for 10-15 minutes.

MAX. PERMISSIBLE SHAFT SEAL PRESSURE

RW...; RW...UK motors with drain connection:

The shaft seal pressure equals the pressure in the drain line.

RW...1 motors without drain connection:

The shaft seal pressure never exceeds the pressure in the return line.

RW...U motors with high pressure seal and drain connection:

The shaft seal pressure equals the pressure in the drain line.
